Received 5 July 2007; accepted 6 July 2007

Key indicators: single-crystal X-ray study; $T = 173$ K; mean $\sigma(\text{C}-\text{C}) = 0.003$ Å; R factor = 0.040; wR factor = 0.086; data-to-parameter ratio = 22.2.

The geometric parameters of the title compound, $\text{C}_{11}\text{H}_{13}\text{BrN}_2\text{O}_2$, are in the usual ranges. In the crystal structure, the molecules are connected by $\text{N}-\text{H}\cdots\text{O}$ hydrogen bonds to form centrosymmetric dimers.

2-Bromo-*N'*-isopropylidene-5-methoxybenzohydrazide

B. K. Sarojini, H. S. Yathirajan, K. Sunil, B. Narayana and M. Bolte

Comment

Hydrazides and their Schiff bases are useful precursors in the synthesis of several heterocyclic systems. Some substituted hydrazides and their Schiff bases are reported to exhibit carcinostatic activity against several types of tumors and also possess antimicrobial activity. It is also used as an intermediate in many pharmaceutically important compounds. A new Schiff base of the hydrazide, C₁₁H₁₃BrN₂O₂ was synthesized and its crystal structure is reported.

Geometric parameters of the title compound (Fig. 1) are in the usual ranges. All seven non-H atoms of the acetone hydrazone moiety lie in a common plane (r.m.s. deviation 0.007 Å) which is almost perpendicular [88.52 (6)°] to the aromatic ring. In the crystal, the molecules are connected by N—H···O hydrogen bonds to form centrosymmetric dimers (Fig. 2).

Experimental

A mixture of 2-bromo-5-methoxybenzohydrazide (2.45 g, 0.01 mol) and acetone (1.2 g, 0.02 mol) in 15 ml of absolute ethanol containing 1 drop of dilute sulfuric acid was refluxed for about 4 h. On cooling, the solid that separated was filtered and recrystallized from ethyl acetate (m.p.: 404–406 K). Analysis for C₁₁H₁₃BrN₂O₂: Found (Calculated): C: 46.21 (46.33); H: 4.54 (4.60); N: 9.73% (9.82%).

Refinement

H atoms were found in a difference map, but they were refined using a riding model with C—H = 0.95 Å and $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C})$.

Figures

Fig. 1. Perspective view of the title compound with the atom numbering; displacement ellipsoids are at the 50% probability level.

2995 reflections with $I > 2\sigma(I)$

$R_{\text{int}} = 0.080$

$\theta_{\max} = 29.6^\circ$

$\theta_{\min} = 3.6^\circ$

$h = -10 \rightarrow 10$

$k = -18 \rightarrow 16$

$l = -15 \rightarrow 15$

Refinement

Refinement on F^2

Least-squares matrix: full

$R[F^2 > 2\sigma(F^2)] = 0.040$

$wR(F^2) = 0.086$

$S = 1.17$

Hydrogen site location: inferred from neighbouring sites

H atoms treated by a mixture of independent and constrained refinement

$$w = 1/[\sigma^2(F_o^2) + (0.0262P)^2 + 0.9527P]$$

where $P = (F_o^2 + 2F_c^2)/3$

$(\Delta/\sigma)_{\max} = 0.001$

$\Delta\rho_{\max} = 0.47 \text{ e \AA}^{-3}$

3404 reflections $\Delta\rho_{\min} = -0.53 \text{ e } \text{\AA}^{-3}$
 153 parameters Extinction correction: SHELXL97,
 $F_c^* = kFc[1+0.001xFc^2\lambda^3/\sin(2\theta)]^{-1/4}$
 Primary atom site location: structure-invariant direct Extinction coefficient: 0.0108 (9)
 methods
 Secondary atom site location: difference Fourier map

Special details

Experimental. ;

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > 2\sigma(F^2)$ is used only for calculating R -factors(gt) *etc.* and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
